RE: Juan Funes (D.O.B. 6/11/71)

Juan has been a patient of mine since January 5, 2018. He has complied with all appointments and has not cancelled, no showed or rescheduled, also has passed ALL random urine screen testing. There was a question brought to my attention about Vivitrol VS Antabuse in his treatment, in my medical opinion I believe that the Vivitrol Treatment that Juan is receiving is much more effective. Vivitrol has a craving blocker were the patient has had NO urges to drink. Also, the side effects are much less than Antabuse.

Patient is doing extremely well in the Vivitrol program. If you have any questions, please feel free to give my office a call.

Thank You

To whom it may concern,

Juan has been attending and is engaged in his therapy sessions at Fellowship Health Resources off and on since May of 2017 with the last appointment being today, August 7th. He has a diagnosis of Alcohol Use Disorder, severe. In sessions we have gone over the triggers, faulty thinking, and the steps that occur right before reaching for that drink. Juan is working on understanding his addiction, on taking responsibility for his actions, as well as naming the antidote to this addiction. He is becoming more present to the notion that alcohol for him is a poison and a punishment versus a reward or a way to escape stress. He today has a closer relationship to his sons and understands what he has to lose. He knows that alcoholism is a disease. It is something that he has, but that it is not who he is. He is learning that minimizing stress, eating well, sleeping well, getting good exercise, and fully appreciating the importance of owning his own work and of knowing that he is blessed with people who care about him. His own self-love has to match that.

Sincerely,

Isabel Storey, LMHC
